# PATRIOT ROLLFORMING LINE and TRIM ROLLFORMERS

## MULTI & SINGLE TRIM ROLLFORMERS

MRS continues to grow and offer new and exciting equipment to better serve all of our customers. Recently we recognized a need for single trim lines that were priced competitively with combo lines. Our engineering team was tasked with creating a quality design that would be economical to produce, without sacrificing the quality that MRS is known for. Grabbing cues and design ideas from our proven Patriot Rollformer our team designed a single trim line that offers MRS industry leading quality with a price point that allows customers to grow and add equipment as needed. We still offer our ever popular multi profile lines as well which can produce up to 6 different profiles. Whether it's a single profile or a multi-trim rollformer, your business will benefit with a MRS Trim Rollformer.

## PATRIOT ROLLFORMER

The Patriot Rollforming Line is MRS' most versatile rollforming line yet. The Patriot's integrated shear and modular die set is capable of producing many different profiles on one single machine. The advanced technology in the modular die set acts as a cartridge and allows the user to switch out the dies to different profiles in about 15 minutes. Simply stated, one single rollformer is able to produce however many panel designs you purchase. While keeping true to the MRS philosophy, the Patriot Rollforming line is held to the same standards as the rest of the products sold at MRS.

## METAL ROLLFORMING SYSTEMS CONTINUES TO GROW AND EXPAND

Demand for MRS equipment continues to rise. In an effort to reduce our lead time and continue to service our customers at the level we demand, Metal Rollforming Systems has invested heavily in a new building and equipment. We have doubled the size of our tooling department, added more assembly bays, and added another 10,000 square feet of plant space. This has greatly increased our capacity and our ability to meet stringent deadlines.
